

Math Wars – AB Calculus

Scrambled 153 – Limits & Derivatives

Maximum Time: 7.75 Minutes

Directions: To start, you need to download the Math Wars application on your cell phone: Use the QR code or the url: <https://mastermathmentor.com/mmm/mathwars.ashx?key=153>

When ready, start the timer and then solve the problems below, entering your choice, A, B, C, D and pressing for each problem when you are sure of your answer. When complete, stop the timer. You will see problems you got correct in green and incorrect in red. You will receive a score based on how many problems you got right and your time. A perfect score is all problems correct using half the maximum time or less. You can text or email your friends with your results.

- (1 pt) The line tangent to $y = x^2 - a^2$ at $x = a$ will always have slope
 - positive
 - negative
 - zero
 - depends on a
- (3 pts) If $f(-4) = 8$ and $f'(-4) = -8$, approximate the value of $f(-3.5)$
 - 4
 - 12
 - 68
 - 52
- (5 pts) Let $f(x) = 6 + \sqrt{x}$. Find the value of c that that satisfies the Mean-Value Theorem for f on $[0, 9]$.
 - $\sqrt{\frac{2}{3}}$
 - $\sqrt{\frac{3}{2}}$
 - $\frac{9}{4}$
 - 1
- (7 pts) Find $\lim_{x \rightarrow 0} \frac{\sin 2x + 6x^2 - 2x}{x^2(x+1)^2}$
 - ∞
 - 0
 - 6
 - 12
- (9 pts) Let $f(x)$ be a function such that $\frac{dy}{dx} = 2x - y$. Which of the following statements is true?
 - It is possible for f to have a relative minimum
 - It is possible for f to have a relative maximum
 - It is possible for f to have an inflection point
 - I only
 - II only
 - III only
 - None of these
